**NEW ROUNDABOUT SPIRAL FRAME
FOR SEPARATORS AVAILABLE FROM
MIDWESTERN INDUSTRIES, INC.**

Midwestern Industries, Inc. has developed the new Roundabout Spiral Frame (RAS) to increase production, prolong screen cloth life and improve product specifications.

This unit handles higher feed rates and is ideal for use in removing fines, long or slivery oversize and oversize from slurries.

The RAS unit discharges oversize material 360 degrees from the screen surface into a spiral trough, where the oversize moves rapidly down to the discharge spout.

The RAS frame is designed to mount on Midwestern separators or on any other round separator. With its combined benefits of increasing production, making more efficient use of materials, and improving product specifications, the RAS unit provides significant cost-reduction capabilities.

Headquartered in Massillon, Ohio, Midwestern Industries, Inc. manufactures a complete line of vibrating screen equipment and screen heating products, and weaves wire cloth. For more information about the Roundabout Spiral Frame, contact:

REWARD

Companies are being paid for their spent or used, steel shot, steel grit, or aluminum oxide grain. Send us a representative sample (1-2 lbs.) of your waste material. Our lab will test and evaluate the sample. If the material meets our specifications, we will reward you based on the quality of that material. Please send your samples to the attention of:
