And much, much  
more!

## Announcing the Creation of the Shot Peening Universe

1996182

On January 30, 1996, the largest explosion since the Big Bang announced the creation of the Shot Peening Universe.

In a single moment in time a previously unnoticed black hole caught in a time warp converted humongous amounts of energy from the remnants of technology formerly called shot blasting.

Experts had predicted for eons that the universal laws of shot peening would ultimately overcome several laws of nature, such as apathy and neglect and an entirely new world order would be born.

We are indeed fortunate to have witnessed such a momentous occasion.

Several world leaders have speculated that with the proper application of this new science of shot peening that wars will cease and world famine might finally be abated.

Others are even more optimistic about the tremendous opportunities that are already evolving at an astounding rate.

Fatigue is said to be reduced by orders of magnitude in critical automotive and aerospace components. Stress corrosion cracking is virtually banished in a wide variety of materials.

Countless reports of cracks being arrested have been received (although no one seems to know precisely where they are being retained. Some scholars speculate that a mirror universe is accepting the cracks for possible conversion into empty holes.)

This process was predicted by Dr. Peener just before his untimely death on April 1st.
