Progressive Technologies Announces PRIMS-NT

Progressive Technologies, Inc. announces a new version of their Process Reporting & Integrated Monitoring System (PRIMS) machine interface for shot peening process control. This improved version of their successful DOS-based system uses the Windows NT (4.0) operating system. The new PRIMS-NT retains the popular features of the previous system while adding many exciting new features.

PRIMS-NT provides complete data acquisition capabilities which exceed the requirements of all applicable industry peening specifications. Custom reports are easily built; multiple part pictures can be displayed for peening program selection; process instructions are integrally linked; and Windows-style help messages are provided. PRIMS-NT also features improved part program control.

A Preventive Maintenance (PM) option is available. PM tracks hundreds of specific machine functions and provides an on-screen maintenance system with help messages to guide users through the maintenance procedure.

PRIMS-NT and PM have too many features to mention here. For more information, please contact Progressive Technologies at (616)957-0871 or 1-800-968-0871.
