CamScan 100 Inspection System

Pittsburgh, Pennsylvania. The CamScan 100 Inspection System is an off-line audit inspection system that monitors residual stress from manufacturing processes and detects grinding damage and some heat-treatment qualities. The unit requires manual loading and unloading of the test piece. The sensor scans the surfaces and test information is sent to a RollScan central unit. For more information, contact AST at (412)963-0676 or info@stresstech.com.
