2003 Shot Peening & Blast Cleaning Workshop

Scottsdale, Arizona October 28 - 31

The 13th Annual Shot Peening and Blast Cleaning workshop was the most comprehensive presentation of techniques, applications, equipment, and maintenance on shot peening and blast cleaning processes in one place, at one time. Twenty-four industry experts presented material to students from engineering firms, aeronautical maintenance facilities, metal finishing companies, atomic energy plants, airlines, military bases, the FAA, and manufacturing. Forty-three students attended and passed the Level I and II Exams, and six students attended and passed the challenging Level III Exams. The photos tell the whole story — it's the opportunity to share information with work associates from so many different industries that make the workshop an invaluable experience.
